

AGILE INTRODUCTION - 1DAY

Your questions answered, smashing agile myths, implementing business agility, plus so much more

Everyone is talking about it. Some organizations are doing it well, many are struggling to get any value out of it.

It started in IT and is now being embraced by the early adopters who recognize that agility in IT **and** in the broader business context is becoming a necessity for organizational survival in our volatile, rapidly changing economy.

You've heard that agile is just a mind shift adjustment, well it's actually a massive mind shift change and a very different way of getting work done, in a market that abounds with agile mis-conceptions, assumptions, and myths, all getting in the way of your agile understanding and your organization's journey to business agility.

WHAT IS

This powerful one-day event covers a full introduction to agile, helping to shape your agile mindset so that you can take advantage of, and apply agile techniques to your work, within the context of your teams, departments, projects and even your organization. It covers the agile values, principles and methods, and shows you how to turn theory into practice, and how to make sense of the various different agile models.

The session was exceptional insightful and informative. I recommend training with Guy. He makes agile seem so easy, thanks I guess to his years of project and agile experience in business.

TARGET AUDIENCE

Are you planning to:

1. Move from a waterfall project method to an agile one?
2. Invest your organization resources and money in an agile way of working?
3. Join an agile team or an agile organization?

This one-day event will get you started in the right direction, on a road that can easily waste your efforts if you chose the wrong direction.

This is for all project managers, change agents, product owners, PMO staff, line managers and executives who want to get a good understanding of agile in just one day.

In fact, it is for anyone who wants to make sense of agile.

There are no pre-requisites, just a curiosity about agile.

The Agile Introduction training delivered by Snap Tech was great! I'm now confident that I really do understand what is agile, and what is not! The day went too quickly with a very engaging mix of lectures, exercises and sharing of practical experiences.

APPROACH & DURATION

This is a one-day facilitated virtual classroom event.

Enquire about our three hour executive overview.
